

Poisson network,
no dispersion

negative binomial network,
low dispersion

negative binomial network,
high dispersion

— t_I , peak time of prevalence $I(t)$

— superspreading peak time t_m of $m(t)$

..... $\left(\frac{1}{2} - \frac{\gamma}{4(\beta + \gamma)(\mathcal{R}_0 - 1) + 2\gamma}\right)t_I$, upper bound on t_m
